

# **FIRE DEPARTMENT INFO #5**

## **Help Us Help You!**

Our vehicles are aging. The oldest, "Attack", is a 1989 vehicle. While some enjoy antiques, this is not good for Fire Trucks! The cost to maintain this truck exceeds the average since parts have to be custom made and retrofitted. We recently had a brass fill valve, deteriorated from age and water exposure, explode. Thankfully no one was hurt; however, there are concerns about the next item to go...

Our building is aging. Originally built in about 1965 the plumbing was deteriorating. Thanks to the Auxiliary, the plumbing pipes have been repaired and we can again offer a safe place for our staff to shower (decontaminate) after an event.

We now need to ensure the rest of our building is up to code.
